NAPLANA Plus anti-slip
Article No. 2086

Characteristics: NAPLANA Plus is an emulsion based on natural raw materials which protects varnished, waxed and oiled surfaces against dirt and mechanical wear. After a short drying time and without polishing, it makes a silky-matt, breathing and dirt-resistant finish. It also refreshes the look of the varnish, wax or oil. In order to prevent an unpleasant and difficult-to-remove build-up of wax, clean the floor regularly with BIOFA Household Cleaner 4010. Regular maintenance with Naplana prolongs the life of a floor finish considerably. OECD tests confirm that Naplana Plus is at least 99% biodegradable.

Ingredients: Water, carnauba wax, microwax, alcohol ester.

Application: For all varnished, waxed or oiled surfaces, especially timber and cork. On very smooth stone surfaces Naplana Plus should be used sparingly. For protection add Naplana plus to clean water after cleaning the floor surface.

Directions for use: For regular maintenance, put 4 capfuls of Naplana in approx. 5 litres of water and apply evenly with an absorbent cloth or floor wiper. Newly varnished surfaces can be given a coat of undiluted Naplana when fully hardened out (after 7 days). Apply thinly and evenly with a cloth or floor mop. Do not use Naplana Plus undiluted on oiled surfaces.

Wash implements with water immediately after use.

Coverage: When used undiluted: 60-70 m² per litre.

Storage: Store in a cool place, but protect from frost. Close container tightly after use.

Safety precautions: Keep out of the reach of children.

Disposal: Cleaned containers can be reused or taken for recycling.

Disposal key: 020399
