Product Variants

- Helifix Bars - 450mm ()
- Helifix Bars - 700mm ()
- Helifix Bars - 1000mm ()

Product Description

Helifix bars are primarily used to tie cob block repairs in to mass cob walls. We would normally use 450 mm lengths with half being hammered into the mass cob and the other half being laid. The longer lengths are generally used for repairing cracks.

[Headed Skew fasteners](#) can be used for brackets etc. into cob without using timber dowels first.
