## Product Summary

## Product Description

Reabilita Cal AC (formerly Finishing Render) by SecilTek - a lime-based premixed fine top coat render and renovation plaster.

Reabilita Cal AC is a blend of natural hydraulic lime and carefully selected aggregates.

Use as a finishing coat in the renovation and rehabilitation of exteriors on old masonry. It is also used as the designated finish for the ecoCORK insulated render system and Cork Board Insulation systems.

Use on old or young rendered surfaces as a finishing layer in conservation and renovation. The use of natural lime binders, and their special composition, results in an excellent physical chemical behaviour and mechanical performance.

Its thixotropic adhesion and permeability properties means it is particularly suitable for use over old rendered substrates.

You can also use SecilTek Reabilita Cal AC as a lime filler for repairing fine cracks and damage on external lime renders.

Dry bagged product - just add water.

**Coverage:** 25 kg bag covers 4 m<sup>2</sup> at 4 mm thick (applied in two coats of 2 mm thick each).

Decorate with one coat of SecilTek Silicate Primer and two coats of SecilTek Silicate Paint.
